Wavelets and Signal Treatment

Tutor: M. Teresa Carrillo

SCOPE OF THE COURSE

The aim of this course is to cover the techniques used in signal processing such as cosine transform, wavelets and multiresolution directional methods: Contourlets, Crisp-Contourlets, Nonsubsampled Contourlets, Uniform quincux DFB (uqDFB), Non-Uniform quincux DFB (nuqDFB), etc.

We will use MATLAB to practice the previous topics on image processing, denoising, etc.
